

NanoTech Lubricants

NanoTech's Military Gun Oil is the latest technology for protecting and extending the life of your weapons without the use of chemicals, which can deteriorate and harm weapons.

Every bottle of our Military Gun Oil contains millions of 4-6 nanometer sized-diamonds, each of which is less than ten-thousandths the diameter of a human hair. Each nano diamond is encapsulated in a specially formulated non-tacky biodegradable oil. The nano diamonds "creep" into the mechanisms of the weapon loosening dirt and debris and leaving a self-healing thin layer of protection behind, which help to keep gunpowder residue from sticking to the metal surfaces during use. The nano diamonds embed in the pores of the metal surfaces of the gun's components, thus helping to seal out dirt, debris and corrosion-causing moisture. Nano diamonds are round in shape and change "sliding" friction into "rolling" friction. Acting like little ball bearings they allow the metal surfaces of the gun to "roll" over each other instead of scrapping against each other.

Military Gun Oil is designed especially for automatic weapons used by military and police forces and will penetrate, loosen dirt and debris and lubricate with a "self healing" thin layer of oil. Special additives have been added to help protect weapons from corrosion.

Weapons will react faster and with less jams even in extremely cold or hot temperatures. Military Gun Oil will keep weapons working in the harshest conditions.

KEY BENEFITS INCLUDE:

- Reduced Friction
- Less Jamming
- Cleaner Metal Surfaces
- Faster & Smoother Operation
- Displaces Moisture
- Works in Extreme Cold
- Excellent Corrosion Protection
- Over 95% Readily Biodegradable

"Nanotize" your weapons today and protect your investment!

BioDegradable
